EXPERIMENT

Design a Wireframe for a Mobile Application Incorporating Localization Features Using Figma

AIM

To design a mobile application wireframe using Figma that incorporates localization features such as language selection, country/state/city selection, and location-based information.

REQUIREMENTS

Figma account and web browser; desktop or laptop; Figma Design and Prototype tools.

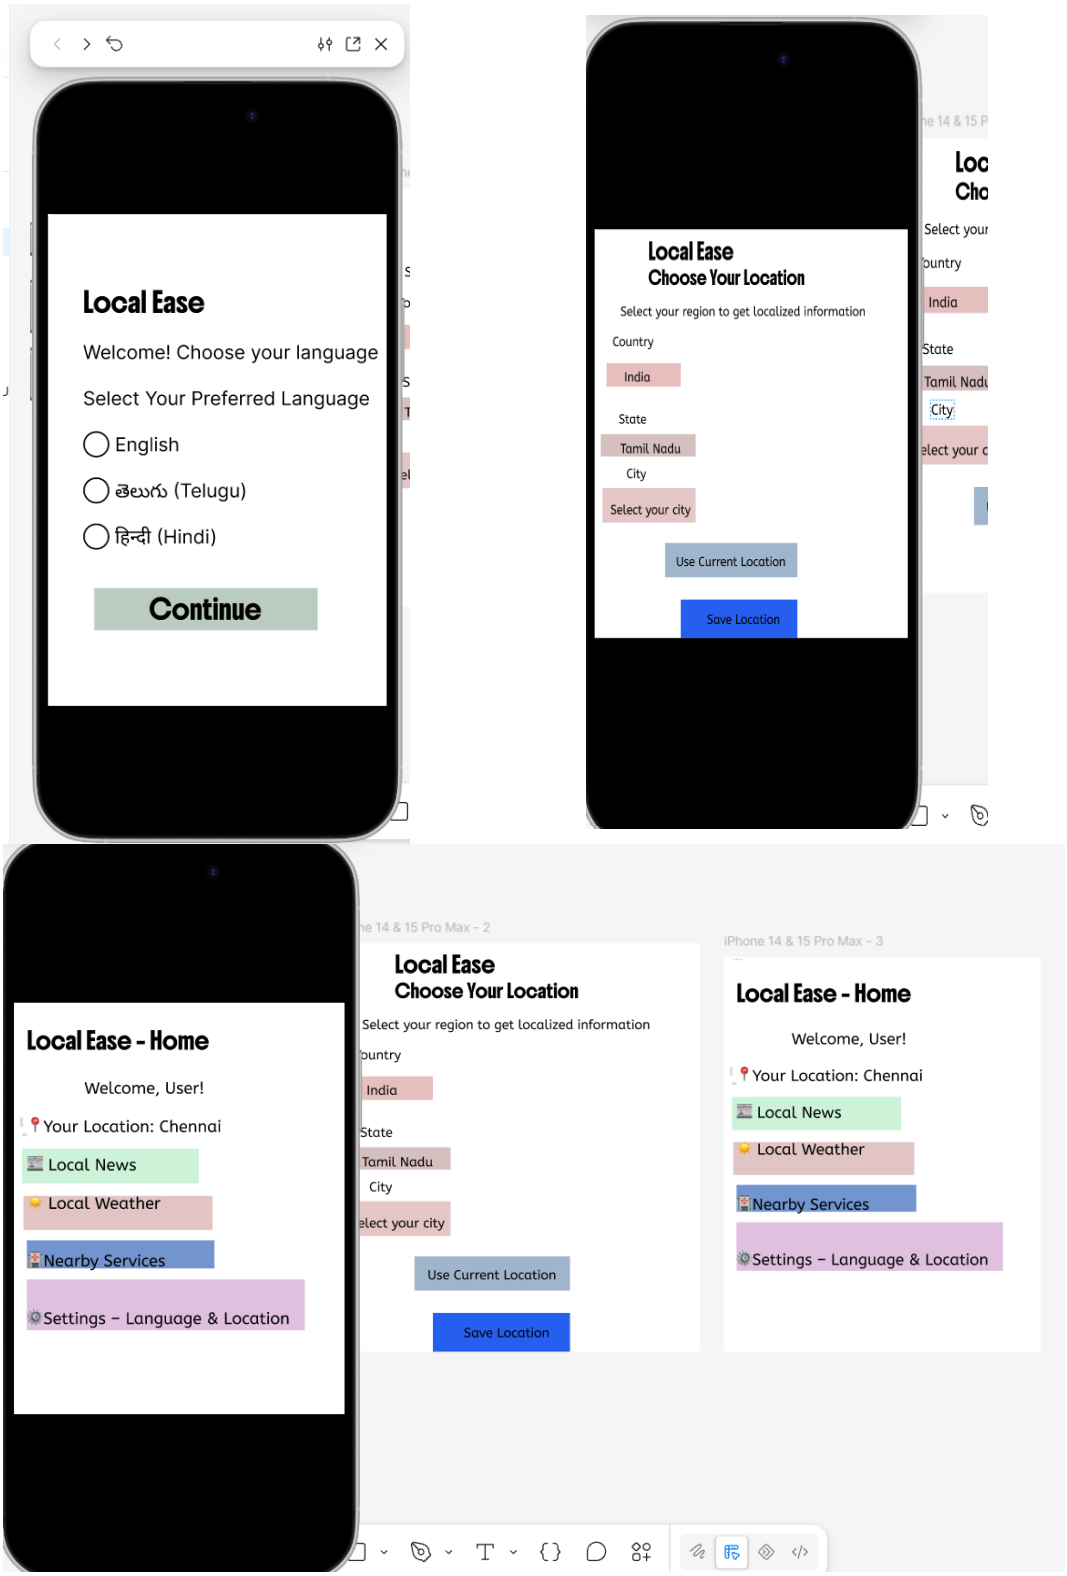

PROCEDURE

1. Open Figma and create a new design file.
2. Press F to select the Frame tool and choose a mobile device preset, such as iPhone 14 or iPhone15.
3. Create Screen 1 – Language Selection. Add the app title “LocalEase”, a welcome message,language options (English, Telugu, and Hindi), and a Continue button.
4. Create Screen 2 – Location Selection in a second mobile frame. Add Country, State, and City fields,along with “Use Current Location” and “Save Location” buttons.
5. Create Screen 3 – Localized Home Screen in a third mobile frame. Add a welcome message,selected location, Local News, Local Weather, Nearby Services, and Settings – Language & Location.
6. Use text, rectangles, icons, and consistent spacing to arrange the elements. Use rectangles as inputfields and buttons, and apply suitable colours, borders, and font sizes.
7. Open the Prototype tab. Connect Continue on Screen 1 to Screen 2, and Save Location on Screen 2 to Screen 3. Set each interaction to On click → Navigate to.
8. Click Present to test the screen navigation and save the Figma design.

DESIGN

The wireframe is designed as a three-screen mobile application named LocalEase. Screen 1 allows the user to select a preferred language (English, Telugu, or Hindi). Screen 2 allows the user to select a country, state, and city, or choose the current-location option. Screen 3 displays localized content based on the selected preferences, including local news, weather, nearby services, and settings. Rectangular fields and buttons are used for clear interaction. Prototype links connect the screens in the order Language Selection → Location Selection → Home Screen.

SCREEN-WISE DESIGN

RESULT

A three-screen mobile application wireframe named LocalEase was designed in Figma. It includes language selection, regional and city selection, and a localized home screen. The screens are connected using prototype navigation to demonstrate the localization workflow.
